

---

I just got this phone and it's really great, please read my review! Hi there, thanks for reading! I'm new to the Klub 17 line of smartphones and wanted to tell you a little about my experience with the Klub 17 V7.5 74 model. I've been using it for a few weeks now and it works well in most instances. The only issue I have is that sometimes when I try to send a message through WhatsApp, it goes all wonky and doesn't appear until I restart my phone - but other than that, it's been running smoothly. Even though this is an older model, the quad-core processor still works well for most apps and web browsing.

(See photos below) This is my review of the Klub 17 V7.5 74, I just purchased it and used it for about 2 weeks now so here are my thoughts so far: At first, I thought it was quite fast, but after using it for a longer period of time, I realized how slow most things are with this phone. The most noticeable thing with the speed is the GPS, which takes forever to get an accurate location. I have a clear view of the sky and it just takes a long time to get an accurate location. Something that annoyed me after a while was the camera, it always has a delay with taking photos and also there is a delay when you switch to video. I don't really use the built in camera so I only really noticed when I used the Skype app to make a call - I thought something was wrong with my Internet! Also, when using Facebook or Twitter, there is often a problem with loading thumbnails on my timeline. But apart from those issues, everything else is slow slow slow...

I've had Klub 17 V7. 5 74 for a few days now and here are my thoughts. First off, I'm glad it has a camera, since its been a while since I've had one. There are 2 camera apps installed by default but both of them cause a big fps hit when you try to save a video clip or a photo. It's weird how the front facing camera is really fast while the rear is so... slow. I remember my old beauty dice phone taking about 1/4 second to take a picture and perfectly sharp while this phone takes 1/10th of that time, and the pictures are sometimes blurry and blurry. The actual software is also such an eyesore.
